### Models: P5, P5A

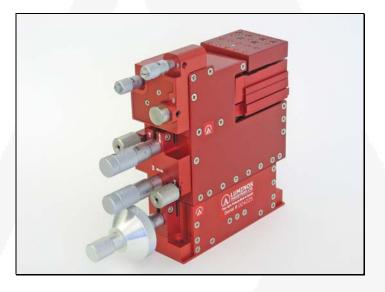

# Yaw, Pitch, XYZ Manual 5-Axis Stage

#### **SUPERIOR PERFORMANCE**

Imagine a positioning system so stable and easy to adjust that singlemode optical fiber alignment is as simple as tuning a radio! No need to let go of the micrometers while adjusting - the I5000 is *extremely* touch insensitive. And with the patented ergonomic inline design, all the micrometers are easily accessible on one side - just rest your hand comfortably on the table and enjoy the ease and efficiency of quickly aligning any type of fiber. No fiber alignment challenge is too difficult - even 1-2 micron core lensed fibers can easily be aligned. This is possible because of the radical departure from conventional design.

### **FEATURES**

- Patented Inline actuators provide ease of access.
- Patented 25x Ratio Drive<sup>™</sup> system affords superior resolution for far less cost.
- Small footprint allows multiple unit workstations.
- Onboard controller for actuators avoids high cost of separate motion controllers.
- Damped exterior shell design provides superior vibration and touch insensitivity.
- Lightweight aluminum construction allows system to be moved easily by other motion equipment.
- High mechanical stiffness affords rugged and stable base system.
- Patented linear dual flexure Z offers frictionless repeatable straight travel.
- Dual flexure Yaw and Pitch stages provide extreme resolution without arc error.

#### INNOVATION

The Luminos I5000 benefits from our patented Ratio Drive™ on the X & Y Axes. A standard micrometer, which has about 1/3 the backlash of a differential micrometer, is further improved by the 25x Ratio Drive™ resulting in a backlash of only 20 nanometers and an incredible single-sided resolution of just 1 nanometer! The roll, yaw, and pitch axes use similar leverage techniques to transform linear motion from the actuator into extremely precise rotational movements at the output.

The I5000 is extremely vibration and temperature insensitive. Internal damping eliminates many of the resonance effects typically associated with flexure stages.

#### ACCESSORIES

With accessories ranging from fiber array holders to contact sensors, Luminos can get you out-fitted and up-and-running quickly on your applications

#### **AUTOMATION**

With this advanced design, upgrading to automation is easy and inexpensive. Our standard, low cost stepper motor option provides the I5000 with a resolution of 4 nanometers and a 1/2 millimeter of travel on the X and Y axes. An additional 2 millimeters of manual travel is still available using the coarse adjustments. If you require more travel to be available using the actuator, consider the I5005. The Z axis provides a larger ½ inch (12.5mm) travel on the focal axis and a resolution of 100 nanometers. Using the internal Linear Motors option, the I5000 is capable of ½ nanometer movements on the X and Y axes. The Z axis provides a larger ½ inch (12.5mm) travel on the focal axis and a resolution of 0.1 micrometers. The same gives a resolution of 0.2 arc seconds on the pitch and yaw axes..

#### ORDERING INFORMATION

#### Part # and Description

P5-M-M-M-M-N-1-H-N

**I5000**: 5-Axis Positioner, Z-Axis Actuator: Imperial Micrometer, X-Axis Actuator: Manual Micrometer, Y-Axis Actuator: Manual Micrometer, Yaw Actuator: Manual Micrometer, Pitch Actuator: Manual Micrometer, XY Linear Motors: None, XY Coarse Adjust: 40 pitch set screw, Mounting Axis: Horizontal, Side Damper: None

#### P5A-M-M-M-M-H-N

**I5005**: 5-Axis Positioner (5x), Z-Axis Actuator: Imperial Micrometer, X-Axis Actuator: Manual Micrometer, Y-Axis Actuator: Manual Micrometer, Yaw Actuator: Manual Micrometer, Pitch Actuator: Manual Micrometer, Mounting Axis: Horizontal, Side Damper: None

 <sup>&#</sup>x27;Actuator' refers to a micrometer or stepper motor.
 Operator dependent
 Compatible with 1.00" grid optical tables, units mount on 2" intervals with 0.25" allowance for routing of cables etc.
